

# Activity: Growing Cress Experiment

What you'll need:

- Cress seeds
- Compost
- 4 empty yogurt pots
- 4 labels

Before you start, draw on your labels to match these. What do you think each label means?

1

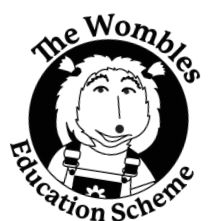

Place some compost into each yogurt pot.

2

Sprinkle some cress seeds onto the compost.

3

Stick a label on pot 1 to show it will have light and water. Place it on a sunny windowsill and water it.

4

Label pot 2 to show it will have light but no water. Place it next to pot 1, but don't water it!

5

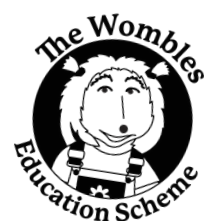

Label pot 3 to show it will have no light, but it will have water. Water the pot, then place it in a dark cupboard.

6

Label pot 4 to show it will have no light and no water. Place it in the dark cupboard and don't water it!

7

Check your pots every day. Make sure you water pots 1 and 3! After one week, compare your pots and record your results.
